

Working with **Super Naturals** handle scale materials from [www.KnifeKits.com](http://www.KnifeKits.com)

-----  
How to perform a super-gloss CA finish:  
-----

- 1) Finish your scales up to 1000 grit.
- 2) Apply a very thin coat of super thin super glue (CA). Wait for the CA to cure. You can spray mild CA accelerator on handle scale.
- 3) Sand again from 400 grit up to a 1000 grit.
- 5) Inspect for lumps of CA and sand until smooth.
- 6) Repeat above process with a new coat of CA. You can repeat this process up to 4 times but do not use too much CA to avoid cracking.
- 7) Sand until you are happy with the finish.
- 8) Final finish with Micromesh 4000 grit and buff lightly on buffing wheel. \*Remove up to 80% of CA in finishing process.
- 9) Final finish 400 - 600 -1000 grit. You can go higher with Micromesh up to 12 000 grit if you want to.
